AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application. Please amend claims 6 and 11 as follows:

LISTING OF CLAIMS:

Claims 1-5 (Canceled)

6. (Currently Amended) An image pick-up device comprising:

a sensor which picks up an image through a lens;

a setting unit which sets chromatic aberration factors based on the image data

picked up from a predetermined pattern, wherein said predetermined pattern

corresponds to a pick up resolution pixel pitch of said sensor; and

a correction unit which corrects image data picked up from an original image

by using the chromatic aberration factors set by the setting unit.

7. (Previously Presented) An image pick-up device as claimed in claim 6,

wherein the predetermined pattern is formed on a chromatic aberration board.

8. (Previously Presented) An image pick-up device as claimed in claim 7,

wherein the chromatic aberration board is fixed in an area near a document platen.

9. (Previously Presented) An image pick-up device as claimed in claim 6,

wherein the predetermined pattern is a ladder pattern.

(

- 10. (Previously Presented) An image pick-up device as claimed in claim 6, wherein the chromatic aberration factors are set for each color component.
 - 11. (Currently Amended) An image pick-up device comprising:
 - a sensor which picks up an image through a lens;
- a pattern image with a predetermined pattern, wherein said predetermined pattern corresponds to a pick-up resolution pixel pitch of said sensor;
- a calculation unit which calculates chromatic aberration factors based on the image data picked up from the pattern image;
- a memory which stores the calculated chromatic aberration factors; and a correction unit which corrects image data picked up from an original image based on the stored chromatic aberration factors.
- 12. (Previously Presented) An image pick-up device as claimed in claim11, wherein the pattern image is formed on a chromatic aberration board.
- 13. (Previously Presented) An image pick-up device as claimed in claim
 12, wherein the chromatic aberration board is fixed in an area near a document
 platen.
- 14. (Previously Presented) An image pick-up device as claimed in claim11, wherein the predetermined pattern is a ladder pattern.

- 15. (Previously Presented) An image pick-up device as claimed in claim11, wherein the memory is a line memory.
- 16. (Previously Presented) An image pick-up device as claimed in claim11, wherein the chromatic aberration factors are stored in the memory for each color component.
 - 17. (Presently Presented) An image pick-up device comprising: a sensor which picks up an image through a lens;
- a pattern image with a predetermined pattern, wherein said predetermined pattern corresponds to a pick-up resolution;
- a determining unit which determines a character amount of the image data picked up from the pattern image;
- a setting unit which sets chromatic aberration factors based on the character amount; and
- a correction unit which corrects image data picked up from an original image by using the chromatic aberration factors set by the setting unit.
- 18. (Previously Presented) An image pick-up device claimed in claim 17, wherein the device further comprises a memory which stores the determined character amount and outputs the character amount to the setting unit, and the setting unit includes a table which stores the relationship between the chromatic aberration factors and the character amount.

- 19. (Previously Presented) An image pick-up device claimed in claim 17, wherein the device further comprises an extraction unit which extracts a changing point of the character amount, and a memory which stores the changing point and outputs the changing point to the setting unit, and the setting unit includes a table which stores the relationship between the chromatic aberration factors and the changing point.
- 20. (Previously Presented) An image pick-up device as claimed in claim 17, wherein the pattern image is formed on a chromatic aberration board.
- 21. (Previously Presented) An image pick-up device as claimed in claim 20, wherein the chromatic aberration board is fixed in an area near a document platen.
- 22. (Previously Presented) An image pick-up device as claimed in claim 17, wherein the predetermined pattern is a ladder pattern.
- 23. (Previously Presented) An image pick-up device as claimed in claim 17, wherein the chromatic aberration factors are set for each color component.
- 24. (Previously Presented) An image pick-up device as claimed in claim 9, wherein the number of vertical lines of the ladder pattern corresponds to a ratio of one for every n pixels in accordance with the pick-up resolution.

25. (Previously Presented) An image pick-up device as claimed in claim

14, wherein the number of vertical lines of the ladder pattern corresponds to a ratio

of one for every n pixels in accordance with the pick-up resolution.

26. (Previously Presented) An image pick-up device as claimed in claim

22, wherein the number of vertical lines of the ladder pattern corresponds to a ratio

of one for every n pixels in accordance with the pick-up resolution.

27. (Previously Presented) An image pick-up device as claimed in claim 9,

wherein a width of the ladder pattern is equal to a width of a plurality of pixels in an

auxiliary scanning direction and a length of the ladder pattern is equal to a length of

an entire scanning span in a main scanning direction.

28. (Previously Presented) An image pick-up device as claimed in claim

14, wherein a width of the ladder pattern is equal to a width of a plurality of pixels in

an auxiliary scanning direction and a length of the ladder pattern is equal to a length

of an entire scanning span in a main scanning direction.

29. (Previously Presented) An image pick-up device as claimed in claim

22, wherein a width of the ladder pattern is equal to a width of a plurality of pixels in

an auxiliary scanning direction and a length of the ladder pattern is equal to a length

of an entire scanning span in a main scanning direction.
